AMENDMENT

In response to the Decision on Appeal mailed August 31, 2004, and the accompanying Request for Continued Examination, please amend the above-identified application as follows:

IN THE CLAIMS

Please amend the claims as follows:

1. (Previously Presented) A method of detecting a watermark in a compressed video signal comprising spectral coefficients obtained by transforming pictures of said video signal, the method comprising the steps:

5           accumulating spatially corresponding coefficients of a plurality of pictures;

          inverse transforming said accumulated coefficients into an accumulated plurality of pictures; and

          detecting the watermark in said accumulated plurality of  
10 pictures.

2. (Previously Presented) The method as claimed in claim 1, wherein said encoded video signal includes predictively encoded pictures each comprising coefficients representing a residual picture after subtracting a prediction picture, and wherein the  
5 step of accumulating coefficients is applied to the coefficients representing said residual pictures irrespective of coefficients representing the prediction picture.

3. (Previously Presented) The method as claimed in claim 2, wherein said predictively encoded pictures further include motion

vectors, and wherein the step of accumulating coefficients is carried out irrespective of said motion vectors.

4. (Previously Presented) An arrangement for detecting a watermark in a compressed video signal comprising spectral coefficients obtained by transforming pictures of said video signal, the arrangement comprising:

5                means for accumulating spatially corresponding coefficients of a plurality of pictures;

                 means for inverse transforming said accumulated coefficients into an accumulated plurality of pictures; and

                 means for detecting the watermark in said accumulated  
10 plurality of pictures.

5. (Cancelled).

6. (Previously Presented) A device for recording and/or playing back a compressed video signal, said device comprising means for disabling recording and/or playback of the video signal in dependence upon the presence of a watermark in said video signal,  
5 characterized in that the device comprises an arrangement for detecting said watermark in the video signal, said arrangement comprising:

#### REMARKS

The claims have been amended to more clearly define the invention as disclosed in the written description. In particular, claim 5 has been cancelled.

In the Decision on Appeal, due to Appellants statement that the claims stand or fall together, the Board limited its discussion to one claim, i.e., claim 5. However, claim 5, which has now been cancelled, only related to a decoder which included means for accumulating spatially corresponding coefficients of a plurality of pictures, and means for inverse transforming the accumulated coefficients into an accumulated plurality of pictures, and did not address the detecting of a watermark in a compressed video signal. As such, all of Appellants' arguments relating to the detecting of a watermark were not considered by the Board.
